

Enhanced Transmission Access Form Instructions

The purpose of the Enhanced Transmission Access planning process is to evaluate the means to increase transmission access to potential resources inside and outside the Duke and Progress control areas to serve load in North Carolina; and to increase transmission capability to provide for transactions that go through or out of the Duke and Progress control areas to an external control area. The initial step of this process is for the TAG members along with the Participants to propose scenarios for analysis in the 2013 study. The Planning Work Group (PWG) will review all the proposed scenarios and provide the Oversight Steering Committee (OSC) a recommendation on the Enhanced Transmission Access options for analysis in the 2013 study. The OSC will select the final scenarios and provide feedback to the TAG in March 2013 concerning the Enhanced Transmission Access options to be included in the 2013 study.

The form to be used by the Participants and the TAG members to propose scenarios and interfaces to be studied is also posted on the NCTPC website under TAG Working Documents. **Please submit only one proposed scenario / interface per form; and e-mail your completed form(s) to me at rawodyka@aol.com by February 12, 2013.** If you have any questions concerning completing the form please feel free to contact me via email or by phone at 484-431-0335.
